

Russia & Mongolia

*A*s anglers we all dream of Eden: snow capped mountains, virgin forests, and pristine wild rivers teeming with giant rainbows, Pacific salmon, and sea-bright steelhead. But not until recently did we realize that such a place actually existed.

We are here to tell you that it does. Located a mere four hours southwest of Anchorage, Russia's Kamchatka Peninsula is a volcano studded wilderness the size of California that is home to the greatest diversity of genetically pure cold water fish in the world today.

This is the answer to the traveling angler's prayer — an adventure of magnitude and reward. This is a gift to our troubled times, an opportunity to seize, a rare glimpse at what the rest of the world has lost forever. The last great place is here and the time to fish it is now.
